

YouTube + Reddit Market Intelligence Platform

Below is a **single, unified “North Star” plan + report** that you can actually **execute against**.

I’m wearing **5 hats simultaneously: CEO, Product, Sales/Marketing, ML, Developer** — and I’ll clearly mark decisions that come from each lens.

You should treat this as a **living internal strategy document**.

INTERNAL PRODUCT & EXECUTION REPORT

Product: *YouTube + Reddit Market Intelligence Platform*

(Working title — branding later)

1 PRODUCT MISSION (CEO)

Mission Statement

Help founders, PMs, and agencies **continuously understand market pain, competitor messaging, and emerging trends** — without manually watching videos or reading thousands of posts.

What success looks like (12 months)

- \$20k–50k MRR
 - <5% monthly churn
 - Used weekly, not monthly
 - Clear upgrade path to enterprise intelligence
-

2 TARGET USERS & MVP FOCUS (CEO + Sales)

Primary ICP for MVP (DO NOT EXPAND YET)

1. **Indie SaaS founders**
2. **Small B2B SaaS product teams**
3. **Marketing / growth agencies**

 Explicitly out of scope for MVP:

- Enterprises

- Students
 - Creators
 - Investors (later)
-

③ CORE VALUE PROPOSITION (SALES-FIRST)

What you sell (copy-paste this internally):

“We turn YouTube videos and Reddit discussions from your market into clear pain points, trends, and competitive insights — updated automatically.”

What you do NOT sell:

- Transcription
 - Summaries
 - Generic AI chat
-

④ DATA SOURCES (MVP SCOPE)

INCLUDED

- ✓ YouTube (videos, channels, playlists)
- ✓ Reddit (selected subreddits, posts, comments)

EXCLUDED (for now)

- ✗ Podcasts
- ✗ Review sites (G2, Capterra)
- ✗ Twitter / X
- ✗ LinkedIn

Reason (CEO decision):

Each new platform adds **trust, legal, UX, and ML complexity**. YouTube + Reddit already give 80% of value.

⑤ MVP USE CASES (PRODUCT)

MVP must support ONLY these use cases:

1. **Competitor Analysis**
2. **Customer Pain Point Discovery**

3. **Trend Detection (What's increasing/decreasing)**
4. **Messaging & Objection Insights**

Anything else = distraction.

6 MVP FEATURES — WHAT TO BUILD (VERY PRECISE)

● A. INPUT FEATURES (Developer + UX)

1. Project / Workspace

- Each project = one market / product / niche
- Inputs stored per project

2. YouTube Input

- Paste:
 - Channel URLs
 - Playlist URLs
 - Individual video URLs
- Optional filters:
 - Date range
 - Max videos

3. Reddit Input

- Select:
 - Subreddits
 - Keywords (optional)
- Pull:
 - Posts
 - Top comments
- Time window filter

- ✗** No scraping UI complexity
 - ✗** No browser extensions
-

● B. CORE ANALYSIS OUTPUTS (THIS IS YOUR MONEY)

1. Pain Point Extraction

Output:

- Clustered pain points
- Frequency
- Example quotes
- Source (YouTube / Reddit)

This is your #1 selling feature

2. Feature Requests & Gaps

- “Users wish X existed”
 - “Competitors promise X but users complain”
-

3. Messaging Patterns

- Common phrases competitors use
 - Buzzwords vs real value
 - Overused claims
-

4. Objections & Friction

- Pricing complaints
 - Complexity complaints
 - Trust issues
-

5. Trend Analysis (Simple but Powerful)

- Mentions over time
- What’s increasing / decreasing
- Early signals

⚠ MVP trend analysis = simple line charts + summaries
✗ No fancy forecasting yet

● C. REPORTING & EXPORT (SALES-CRITICAL)

1. Auto-Generated Insight Report

- Structured sections:
 - Key pains
 - Trends
 - Opportunities
- Download as:
 - PDF
 - CSV (raw)

2. Shareable Link (Read-only)

- Agencies LOVE this
- Drives virality

7 FEATURES YOU MUST NOT BUILD (CEO GUARDRAILS)

These will kill velocity or increase churn risk early:

- ✗ Free-form AI chat (“Ask anything”)
- ✗ Custom dashboards
- ✗ Alerts & notifications
- ✗ Team roles & permissions
- ✗ Integrations (Slack, Notion, etc.)
- ✗ Sentiment scores with decimals
- ✗ Predictive forecasting
- ✗ Multi-language support

Rule:

If it doesn't directly help someone **make a business decision**, it doesn't ship.

8 ML & DATA PIPELINE (ML ENGINEER HAT)

Ingestion

- YouTube → transcript + metadata
- Reddit → post + comment text

Processing

- Chunking (semantic)
- Embeddings (for clustering)
- Topic clustering
- Pattern extraction via LLM

Output Strategy (VERY IMPORTANT)

- No raw embeddings exposed
- Everything turned into:
 - Structured insights
 - Human-readable summaries
 - Quotes for credibility

MVP ML Principle:

Interpretability > sophistication

9 TECH STACK (DEVELOPER HAT)

Backend

- Python (FastAPI)
- Async ingestion
- Background jobs

Data

- Postgres (projects, metadata)
- Vector DB (Pinecone / Weaviate / pgvector)

Frontend

- Simple React / Next.js
- Clean, business-first UI

Infra

- Cloud hosting
- Job queue

- Usage-based throttling

- ✗ No microservices
 - ✗ No premature scaling
-

10 PRICING & PAYWALL (CEO + SALES)

MVP Pricing (Launch With This)

- **Free trial:** 1 project, limited videos
- **Pro:** \$149/month
- **Agency:** \$399/month

Paywall triggers:

- Number of videos analyzed
 - Number of projects
 - Report exports
-

11 MARKETING & SALES PLAN (DO THIS BEFORE LAUNCH)

Phase 0: Pre-MVP

- Start posting insights manually on LinkedIn
- “We analyzed X videos and found Y”

Phase 1: MVP Launch

- Founder-led outreach
- 1:1 demos
- Early adopter pricing

Phase 2: Scale

- SEO with insight-driven content
 - Product Hunt
 - Case studies
-

12 METRICS & KPIs (CEO DASHBOARD)

Weekly

- New trials
- Analyses run
- Reports exported

Monthly

- MRR
 - Churn
 - Trial → paid conversion
-

13 CHURN MITIGATION (BUILT-IN FROM DAY 1)

Even in MVP:

- Projects saved over time
- Historical comparison
- Encourage re-analysis monthly

Later:

- Monitoring
 - Alerts
 - Multi-source intelligence
-

14 90-DAY EXECUTION PLAN

Month 1

- Core ingestion + analysis
- 5 design partners

Month 2

- MVP usable end-to-end
- First paid users

Month 3

- Polish reports
- Marketing push

- Double down on best ICP
-

FINAL CEO SUMMARY

Why this MVP will work:

- Clear ICP
- Clear business value
- Low competition
- High willingness to pay
- Expandable platform

Biggest risk:

- ✗ Overbuilding
- ✗ Selling “AI” instead of “insight”

Biggest advantage:

- ✓ You control the narrative
- ✓ You own the intelligence layer
